The AI Job Exposure Report

November 2026 · 923 US jobs, 19,265 tasks

12%
of US workers are in jobs with high or very high AI exposure (score 60+)

40%
are in jobs with low exposure (score under 30)

3,709
of 19,265 job tasks already show up in real AI use (April–May 2026)

Exposure measures how much of a job's work AI could speed up, from 0 to 100. A high score means the job is likely to change shape, not that it will disappear. Worker shares cover the 921 jobs with published BLS employment figures.

Exposure by field

FIELD	AVERAGE SCORE	JOBS	US WORKERS
Computer and Mathematical	74	36	10,176,730
Office and Administrative Support	61	51	17,486,450
Business and Financial Operations	53	48	18,874,650

Airline Pilots, Copilots, and Flight Engineers	35	103,560	$232,140
Dentists, General	25	124,390	$170,950

Five steps to stay ahead, whatever your score

1. **Look up your own job's tasks.** Your job page on jobexposureindex.com lists every task and whether AI can speed it up. Mark the ones you spend most time on.
2. **Use AI on your most exposed tasks first.** People who use AI for the routine parts of their job become more productive, and harder to replace.
3. **Grow the tasks AI finds hard.** Judgement, working with people, hands-on work and responsibility for outcomes hold their value longest.
4. **Know your nearby options.** Each job page lists similar jobs with lower exposure that use many of the same skills.
5. **Check in regularly.** AI changes fast. The weekly report tells you when something moves for your field.
